Dencryl[®] P14

Reactive, medium-viscosity primer for wet substrates

Description

Dencryl[™] P14 resin is a mediumviscosity, transparent, solvent-free 2-component methacrylic resin with good penetration properties and optimised bonding on damp concrete.

Application

DencryI™ P14 resin is used as an adherent primer on concrete and cement substrates.

Advice on application

Once the substrate has been inspected, it normally needs to be pre-treated. As a minimum requirement a pull-off strength of 25 N/mm² is needed. The substrate has to be sound, free of contamination and cement laitance. The necessary quantity of hardener must be adjusted in light of the temperature of the building. For the exact quantities, please refer to the table "Hardener dosages". You must not dose less than the given quantity of hardening powder, as this will jeopardize the curing process. You must also avoid overdosing the hardening powder, as this can likewise lead to serious curing problems. If the pot life, within which good penetration of the substrate is guaranteed, is to be observed, appropriate batch quantities should be estimated. The material must be applied as soon as the hardening powder has inished dissolving in the resin components.

DencryI[™] P14 resin must be applied evenly without leaving puddles by means of a paint roller or brush. If rubber blades are used, the surface must always be rolled with a paint roller afterwards. Matt and heavily absorbent patches must be reprimed wet in wet before hardening until the pores are closed up. If **DencryI[™] P14** resin should be used on a damp concrete 0.3 wht-% **DencryI[™] CP** (calculated on the amount of resin) has to be added. **DencryI[™] CP** has to be added right before application. On top of the substrate a liquid film of water is not allowed. On damp concrete two priming layers are recommended. Do not sprinkle this fist layer. The second layer could be sprinkled loosely into the fresh coat. Resin consumption is about 0.4 kg/m². **Dencoat™ Floor Filler** QS 0.7 – 1.2 mm can be sprinkled loosely into the fresh primer coat. **DencryI™ P14** resin must be completely cured before any further

completely cured before any further coat is applied.

Guideline recipe and batch quantities

Item	Component	Guideline recipe (% by weight)	Comments	Batch for 10 litre bucket
1	Dencryl™ P14	100 %		10 kg 10 litres
	Total:	100 %	Average consumption: 400 g/m²	10 kg 10 litres
2	Dencryl™ Hardening powder	1 – 3.5 % related to item 1	See "Hardener dosages" table for quantities	100 – 350 g

Characteristics of Dencryl[™] P14 in the hardened state

Property	Measuring method	Approx. value
Density	DIN 53 479	1.16 g/cm³
Ultimate elongation	DIN 53 455	7 %
Shore-D	ISO 868	70 – 80 units
Water absorption, 4 days	DIN 53 495	150 mg (50 · 50 · 4 mm)
Water vapour permeability	DIN 53 122	1.05 · 10 ⁻¹¹ g/cm · h · Pa

Hardener dosages

Temperature	Hardening powder % pbw. *	Pot life approx. min.	Hardening time approx. min.
+5°C	2.5	14 - 16	50 - 60
+10°C	2.0	12 - 14	45 - 55
+15°C	2.0	10 - 12	40 - 50
+20°C	1.5	10 - 12	35 - 45
+25°C	1.5	8 - 10	30 - 40
+30°C	1.0	8 - 10	30 - 40

* The quantity of hardening powder is always related to the quantity of resin.

Hardener dosage in presence of 0.3 % pbw. of Dencryl™ Additive M on top of a damp concrete

Temperature	Hardening powder % pbw. *	Pot life approx. min.	Hardening time approx. min.
+5°C	3.5	14 - 16	50 - 60
+10°C	3.0	12 - 14	45 - 55
+15°C	3.0	10 - 12	40 - 50
+20°C	2.5	10 - 12	35 - 45
+25°C	2.5	8 - 10	30 - 40
+30°C	2.0	8 - 10	30 - 40

* The quantity of hardening powder is always related to the quantity of resin.
